Professional Summary

Unity Game Developer with 1.5+ years at a professional studio shipping **2D and 3D games** across **casual mobile** and **real-time multiplayer** genres. Experienced in the full gameplay-engineering cycle: core mechanics and physics-based systems, **networked gameplay with Photon Fusion**, AI behaviors, UI architecture, and **mobile performance optimization**. Strong in **C#**, design patterns, and modular, data-driven architecture that keeps live titles maintainable and fast to iterate. Comfortable moving from prototype to store release and collaborating with teams to deliver maintainable gameplay systems and production-ready builds.

Technical Skills

Languages	C#, C++
Unity	Physics, Cinemachine, Timeline, Animation, Addressables, UISystems
Multiplayer	Photon Fusion 2, Client-Server Architecture, State Synchronization, Client-Side Prediction
Gameplay & AI	NavMesh, Behavior Trees, Hierarchical State Machines, Physics-Based Gameplay, Procedural Generation
Architecture	Design Patterns, SOLID, ScriptableObjects, Event-Driven Systems, Modular/Data-Driven Design
Optimization	Unity Profiler, Object Pooling, Draw Call Batching, LOD Systems, Mobile Optimization, Frame Rate Stabilization
Tools	Git & GitHub, Rider, VS Code

Professional Experience

Trainee Software Engineer (Unity Game Developer) · *Juego Studios Pvt. Ltd.* **Feb 2025 – Present**
Bangalore, India · Game Development Studio

- Built and shipped **2D and 3D Unity titles** across casual mobile and real-time multiplayer, owning gameplay systems, responsive Canvas UI, SDK integration (Google, Apple, Ads, Analytics), testing, and production Android/iOS builds.
- Implemented **Photon Fusion 2 multiplayer**: matchmaking, networked object lifecycle, client-side prediction, and state synchronization.
- Architected **event-driven, decoupled systems** with ScriptableObjects and the Observer pattern, letting gameplay features evolve independently and be tuned without code changes.
- Engineered **physics-based mechanics** (Rigidbody, Joints, custom force models) and **NavMesh-based NPC AI** with state-driven behaviors.
- Cut frame time and memory cost through **profiling-driven optimization** (object pooling, draw-call batching, memory management): [FPS 35→60] on mid-range Android.

Key Projects

CarLeague — Real-Time Multiplayer Vehicle Soccer Game *Unity, Photon Fusion 2, C#*

- Engineered a **Rocket League-inspired multiplayer game** with physics-driven vehicle movement, boost mechanics, and accurate ball physics using custom Rigidbody constraints.
- Implemented **networked game state management** (goal events, match timer, score sync) across all clients using Photon Fusion's Host-Client Model.
- Built a **lobby system** with room creation, ready-up flow, and matchmaking.
- Tuned **arcade handling feel** with camera shake, collision feedback, and responsive controls.

Merge Blast — Level-Based Casual Puzzle Game *Unity, C#*

- Developed and shipped a **level-based casual puzzle game** on Android (Play Store) with progressive difficulty, target-based objectives, and score systems.
- Designed a **data-driven level progression system** supporting configurable objectives, target scores, timers, and level-specific gameplay parameters for scalable content creation.
- Optimized core gameplay systems for **performance, modularity, and scalability**, enabling new levels and

gameplay variations to be added with minimal code changes.

Education

B.E. Computer Science & Engineering

AJ Institute of Engineering and Technology, Mangalore

May 2025

CGPA: **9.0/10.0**

Pre University Course

Parijnan Pre University College, Koteekar, Ullal

2021

Certifications

- **Unity 3D Game Development** — Core gameplay programming and engine fundamentals *Udemy*
- **Design Principles in Game Development** — Game feel, systems design, and balancing *Udemy*
- **Git & GitHub** — Version control best practices for team-based development *Udemy*
